SUMMARY

As a recent graduate with a Bachelor's degree in Informatics and Computer Engineering Education, I am an Entry-Level Front-End Developer with practical skills in modern web development and a strong capability to adapt to new technologies. I specialize in Tailwind CSS, JavaScript, and Vue.js, with hands-on experience in full-stack development using Laravel, Inertia, and Vue. I possess practical knowledge of MySQL and backend integration gained through academic projects, including a Data Warehouse model and a comprehensive Inventory Management System. Having recently completed a 4-month internship developing front-end features for internal web systems, I am a collaborative problem-solver eager to grow and contribute in a professional setting.

PROJECT

INVENTORY MANAGEMENT SYSTEM (LABORATORY)

- Built a web-based inventory system to replace manual asset tracking, utilizing Laravel and Vue.js via Inertia.js to create a seamless Single Page Application (SPA).
- Created a responsive interface with Tailwind CSS, including a dashboard with Chart.js for asset statistics and a functional Dark Mode feature.
- Implemented essential data management features such as Asset CRUD, Loan Management, and an Asset History log to record status changes.
- Applied Role-Based Access Control (RBAC) to manage access rights between Admin and User accounts.
- Added reporting functionality to filter data and export inventory lists to PDF and CSV formats.

PARKING MANAGEMENT SYSTEM

- Developed a parking management application using Python and Tkinter, allowing users to register and track parked vehicles efficiently.
- Implemented insertion sort to organize parking data by availability, optimizing space allocation.
- Integrated sequential search algorithm for quick vehicle lookup based on license plate numbers.
- Designed a real-time parking duration calculator using Python's datetime module to track and display vehicle stay durations.
- Built an interactive GUI with Tkinter, featuring data entry fields, confirmation dialogs, and a dynamic display for vehicle records.
- Automated availability updates when vehicles enter or exit, ensuring accurate parking space tracking.

WORK EXPERIENCE

FRONT-END DEVELOPER (INTERN)

PT. Daya Gagas Internasional | March – July 2025 (4 months)

- Contributed to the development of the DapurGo website interface using Vue.js and JavaScript to create responsive and user-friendly pages.
- Implemented interactive data management features for modules such as Product Data, Dish Data, and Supplier Data based on Figma design prototypes.
- Integrated front-end components with RESTful APIs to enable CRUD operations for product data and user authentication.
- Developed reusable Vue components to streamline interface consistency and performance across multiple dashboard pages.
- Collaborated with the back-end team through GitLab, managed task progress with ClickUp, and coordinated development updates over Google Meet.

EDUCATION

State University of Jakarta
Informatics and Computer Engineering Education

2022 – 2026
GPA : 3.77/4.00

SKILLS

- Web Development
- Front-End Development
- Team Collaboration
- Time Management
- Adaptability
- Language: Indonesian (native), English (intermediate)
- Analytical Thinking
- Problem Solving
